Tittle: Enabling a better dualway handshake between doctors and athletes
Team Members: Ramapriya Ranganath, Sai Akarsh Ache, Alicia Lyu
Instructor:Jacob Thebault-Spieker

Abstract:
We are building a system which will connect the athletes to the doctors. Here we have implemented Google O-Auth for data security. The athletes will be able enter the required injury which they are suffering currently, post which the system will show the list of expert doctors in that domain along with their availability and ratings. The athletes can schedule their appointment with the required doctor after looking at their rating and availability date. The athletes will be able to rate the doctor after their session depending on various parameters. Currently we are starting off this project by building a web based platform for them to connect but in future we will definitely build a cross platform app which will render both on Android and IoS devices.
